

SIZE GUIDE

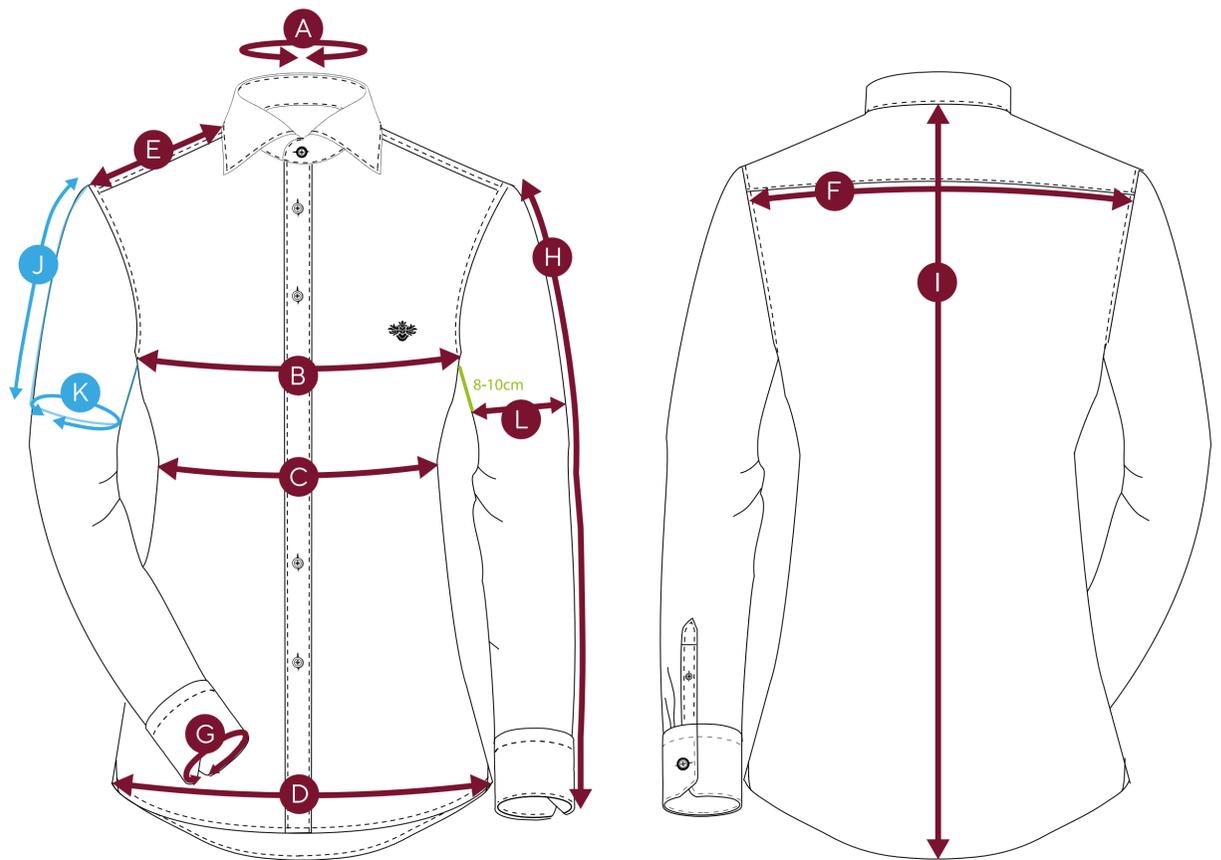

Men shirt

How to measure?

If you're not sure which size to choose, simply grab your favorite shirt, button it up and lay it down on a flat hard surface. For measuring, please follow the picture on the right. When you have your measuring done, compare it with our size guide depending on which shirt fit you prefer.

In order to make your new shirt perfectly fitting, it is very important to measure the bustline (B) and the shoulder width (E) properly. If these two measures match with ours in this guide, then it is very likely that this size will fit you the best.

● For shirt with a short sleeve.

A Neck (collar size)

Open up the shirt and lay it flat with the back of the shirt on the ground. Measure from the centre of the button to the 2/3 length of the buttonhole.

B 1/2 Chest

Place the measuring tape at the top of the seam where the sleeve attaches to the body of the shirt and measure across to the same point on the other side.

C 1/2 Waist

Find the narrowest part of the shirt, which should be about halfway between the armpit and the bottom of the shirt. Measure straight across from the left of the shirt to the right of the shirt.

D 1/2 Hip

Place the measuring tape on the left bottom hem and measure straight across to the same point on the right side of the shirt.

E Shoulder width

Measure along the shoulder seam from the collar to the armhole.

F Back width

Measure along the yoke seam on a back of the shirt.

G Cuff width

Spread the cuff flat. Measure from the one edge to other edge of the cuff.

H Sleeve length including cuff

Measure from the shoulder (where is the armhole seam) to the bottom of the cuff.

I Shirt length

Place the measuring tape at the seam where the collar band attaches to the yoke and measure straight down the middle of the back of the shirt to the hem at its longest point.

J Short sleeve length

Measure from the shoulder (from the seam of the sleeve to the armhole) to the bottom edge of the sleeve.

K Short sleeve width

Measure the width of the sleeve from one end of the sleeve to the other and multiply by two. We always enter the total width of the sleeve.

L Biceps width

Starting point of the tape is measured about 8-10 cm from the armhole along the sleeve seam (green color), measure to the top folded edge of the sleeve while keeping the measuring tape perpendicular to the top folded edge of the sleeve. Multiply the number by two.

BODY MEASUREMENTS

Men shirt

How to measure?

Customer should stand in a **relaxed posture**. It is NOT suitable to put customer in front of the mirror. Customer should be dressed in a shirt for ideal body measure.

If you measure on the right side and also on the left side of body, you take the measure from the customer's view. It is important to look on the customer's body posture, asymmetries and other changes.

1 Neck

The neck measurement is taken around the base of the neck where a shirt collar would sit. Measure with one finger between the tape and the neck.

3 Waist

The waist measurement is taken around the natural waistline which is the narrowest part of the waist. If the customer has a belly, measure the waist at the widest point of the belly. Customer should stand in a relaxed posture.

5 Shoulder width

Measure from the side neck point to shoulder joint.

7 Biceps

Measure around the thickest part of biceps. Customer should flex the bicep while measuring.

9 Shirt length

Measure from the base of the back of the neck following the body down to the point where the customer wants the shirt to end. This point is usually the bottom of the buttocks.

2 Chest

The chest measurement is taken around the widest point with one finger between the tape and the chest. Keep the measuring tape straight and parallel to ground.

4 Hip

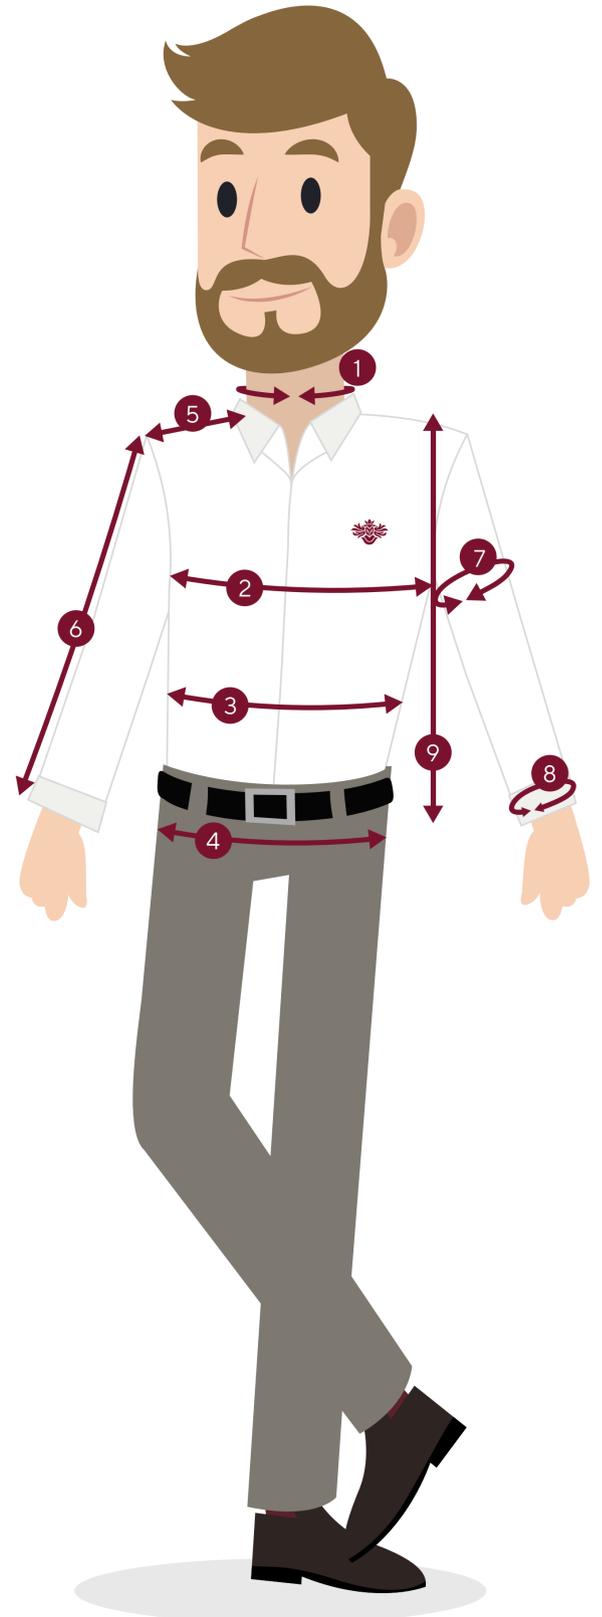

The hip measurement is taken around the hip at the widest part. Measure from the side view.

6 Sleeve length including cuff

First measure the sleeve length including cuff and shoulder – measure from the side neck point across the shoulder point following the bent arm down, ending at the wrist joint. Then you subtract the measure „shoulder width“ from this measure.

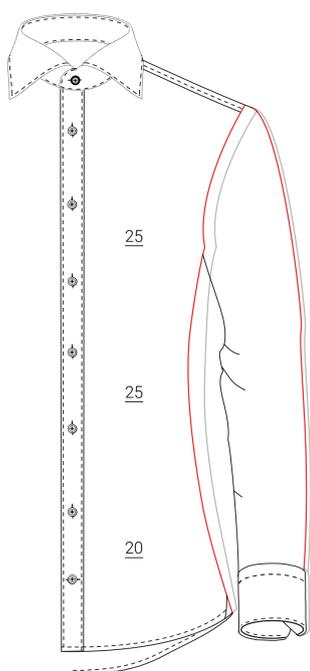

8 Cuff width

The cuff should fit comfortably around your wrist but be tight enough that when buttoned it doesn't slide over your hand. Wrap the tape around the wrist below the wrist bone and add allowance which the customer needs and also add 2,5 cm to this measurement for buttoning. If desired, add allowance to the wrist you wear a watch on.

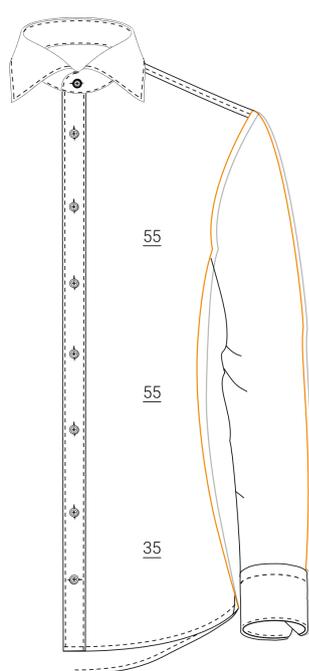

! Remember that we offer 4 basic fits of the shirt, so after the measurement it is necessary to choose which fit will suit you best. In the picture below you can see all the fits and with them the values (in mm) that need to be added to your measurements around your **chest, waist and hips**.

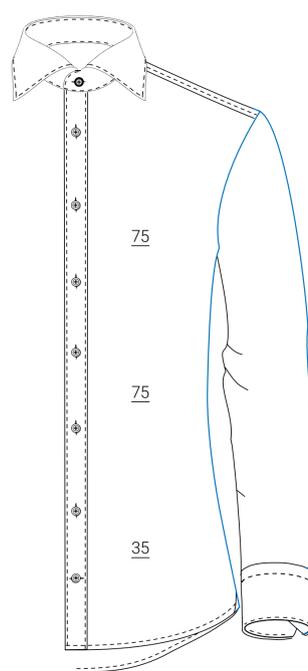

EXAMPLE: Your chest girth is 103 cm, whereas a half value is entered in the table, which is 51.5 cm. Let's say you'd rather have a tighter shirt, so your desired fit is slim. Then you add 55 mm to the half of the measurement around your chest and you get 57 cm. You will do the same with the measurements around the waist and hips and then you compare the values with those in the table below. The ones closest to those in the table then help you find the size of the shirt you should choose.
